

Course Registration Step-by-Step Guidelines

1. **Pay Tuition and Fees:** Ensure you have completed your school fees payment via the [LASU E-payment Portal](#)
2. **Access the Portal:** Visit the [Course Registration Portal](#)
3. **Biodata Registration:** Click on *BIODATA REGISTRATION*. Input your *MATRICULATION NUMBER* and *SURNAME* to log in.
4. **Course Registration Menu:** Update your profile, then proceed to the *Registration* submenu and select *Course Registration*.
5. **Select Courses:** Carefully select all your compulsory, required, and elective courses for the current semester. Do not exceed the maximum or fall below the minimum allowed credit units for your specific faculty.
6. **Submit and Print:** Submit the form online. Always print multiple copies of your **Course Registration Form** and take a copy to your department's level adviser for signing and clearance.

Essential Tips

- **Consult the Course Brochure:** Review your department's specific **Course Distribution List** (which outlines course codes and credit units) before logging onto the portal.
 - **Deadline Consciousness:** Course registration usually has a strict deadline; register early to avoid penalties or portal congestion. [\[1\]](#)
 - **Keep Documents Safe:** Retain your printed and signed course forms safely, as they are often required for clearance during examination periods.
-

Admission Process for Non-Indigenes

This applies to candidates from any state other than Lagos.

Step 1: Register for UTME

- Choose LASU as your **first-choice institution**.

- Meet or exceed the minimum UTME score announced by LASU for the admission year. (For 2026/2027, the minimum is **195**, though competitive courses require much higher scores.)

Step 2: Meet O'Level Requirements

Obtain at least:

- Five credit passes, including English Language and Mathematics (where required).
- In not more than two sittings (some courses such as Medicine have stricter requirements).

Step 3: Upload O'Level Result to JAMB CAPS

Your WAEC/NECO result must be uploaded at an accredited CBT centre before LASU processes your admission.

Step 4: Register for LASU Online Admission Screening

When the portal opens:

- Pay the screening fee.
- Complete the online form.
- Upload the required documents.

Step 5: Aggregate Score

LASU ranks candidates using its aggregate scoring system rather than a written Post-UTME examination. Candidates with the highest aggregates for each course are offered admission.

Step 6: Admission

If successful:

- Accept the admission on JAMB CAPS.
- Print your admission letter.
- Pay the acceptance fee.
- Complete LASU clearance and registration.

Admission Process for Lagos State Indigenes

Everything above applies **plus an additional compulsory stage.**

Step 1: Choose LASU as First Choice

You must:

- Select LASU as first choice.
- Meet the minimum UTME score.

Step 2: Register for the Indigeneship Verification Exercise (IIVE)

This is compulsory for candidates claiming Lagos State origin.

The exercise is conducted by the **Independent Indigeneship Verification Committee (IIVC).**

You must:

- Apply online. [Lagos State University](#)
- Pay the verification fee.
- Print your application.
- Attend the physical verification interview at your designated division (Ikeja, Badagry, Ikorodu, Lagos Island, or Epe).

Step 3: Present Required Documents

Typical documents include:

- JAMB registration slip
- Birth certificate
- Local Government identification
- Family/ancestral documents proving Lagos State origin
- Other documents requested by the IIVC during verification.

Step 4: Obtain IIVC Clearance

If cleared, you receive an Indigeneship Clearance Certificate.

Without this clearance, LASU will **not** consider you under the Lagos State indigene quota.

Step 5: Register for LASU Admission Screening

After verification, complete the normal LASU admission screening like every other candidate.

Step 6: Admission

Admission is offered based on:

- Your aggregate score.
- Your successful indigene verification.
- Course competitiveness and available quota.

Many applicants assume that admission is based only on "cut-off marks," but LASU actually uses a **ranking and allocation system**. Once you understand it, you'll see why two candidates with almost identical scores can have different outcomes.

1. Departmental Aggregate: The First Filter

LASU does **not** conduct a written Post-UTME examination. Instead, it computes an aggregate score using your UTME score and your five relevant O'Level subjects. For recent admission exercises, the university has stated that the aggregate is based on **50% UTME performance and 50% O'Level grades**. After this, candidates are ranked within each programme from the highest aggregate to the lowest.

For example, imagine 3,000 people apply for Computer Science:

Candidate	Aggregate
A	91.50
B	91.25
C	90.80
...	...
500th candidate	77.20

If Computer Science has only 150 available places, only the highest-ranked candidates who fit the applicable admission categories will be considered.

2. Merit List: The First Admission List

The **Merit List** is the first and most competitive stage.

Here, the university primarily admits the highest-ranked candidates regardless of state of origin (subject to the institution's applicable admission regulations). If your aggregate places you among the very top candidates for your course, you are likely to be admitted on merit. Example:

Medicine has 100 seats.

- Candidate A: 89.80
- Candidate B: 89.75
- Candidate C: 89.60

If the merit allocation ends at 89.70:

- A is admitted.
- B is admitted.
- C waits for possible later consideration.

3. Catchment Consideration

After merit admissions, institutions may consider **catchment area** policies permitted under Nigeria's admission framework. Catchment is intended to improve access for candidates from areas the institution is meant to serve. For LASU, Lagos State origin is particularly significant, which is why candidates claiming Lagos origin must complete the **Indigeneship Verification Exercise (IIVE)** before they can benefit from any indigene consideration.

A simplified illustration:

Computer Engineering has 80 seats.

After merit admissions:

- 50 seats are filled.
- 30 seats remain.

Among candidates competing for those remaining seats:

Candidate	Aggregate	Status
Lagos indigene	74.50	Eligible under indigene/catchment consideration

Non-indigene 75.20 Considered under the applicable category rules

Depending on the approved admission policy and available quota, the Lagos indigene may receive admission while the non-indigene may not, even with a slightly higher aggregate. This is because they are not necessarily competing within the exact same allocation category.

4. ELDS (Educationally Less Developed States)

ELDS is a **national admission policy** designed to improve educational access for candidates from designated Educationally Less Developed States.

For federal institutions, JAMB describes admissions as being allocated among Merit, Catchment, and ELDS categories

For a state university like LASU, the dominant special consideration is Lagos State indigenous status through the IIVE. ELDS generally has much less practical impact in LASU admissions than it does in federal universities.

5. Departmental Capacity

Every programme has a maximum number of students it can admit.

Example:

Course	Capacity
Law	180
Computer Science	250
Accounting	200
Medicine	100

Even if 600 applicants qualify for Law, only the number of candidates permitted by the approved capacity can be admitted. Once the programme is full, additional qualified applicants cannot be offered places in that department.

6. Why Two Candidates With Similar Scores Can Get Different Results

This is where many applicants become confused.

Imagine these two candidates:

Candidate	Aggregate	State	Course
Ade	77.45	Lagos indigene (IIVE cleared)	Accounting
Musa	77.60	Kano	Accounting

Although Musa has the slightly higher aggregate, Ade could still receive admission while Musa does not if the remaining available places fall under the applicable Lagos indigene allocation and Ade satisfies those requirements. (

Other reasons two candidates with similar scores may have different outcomes include:

- Different O'Level subject combinations or grades relevant to the programme.
- One candidate not uploading O'Level results to JAMB CAPS in time.
- One candidate failing the Lagos Indigeneship Verification Exercise.
- Departmental capacity being reached before another candidate is considered.
- One candidate accepting or processing admission promptly while another has unresolved eligibility issues.

7. How the Entire Process Fits Together

You can think of the process as a funnel:

1. Meet the minimum UTME requirement and choose LASU as first choice.
2. Upload O'Level results and complete the online screening.
3. LASU calculates your aggregate.
4. Candidates are ranked within each department.
5. Admissions are offered based on:
 - Aggregate ranking,
 - Merit,
 - Applicable indigene/catchment considerations,
 - Departmental capacity,
 - Compliance with admission requirements such as IIVE where applicable.

A practical example

Suppose Computer Science has **200 approved seats** and **5,000 applicants**.

- The highest-ranked candidates are considered first.
- Lagos indigenes who have successfully completed IIVE may be considered within the applicable admission category.
- Admissions continue until all approved places are filled.
- Once the 200th place is taken, everyone below that point must wait for later admission batches or will not be admitted to that programme.

Guide to process Fresher clearance

For a newly admitted undergraduate at LASU, **Fresher Clearance** is officially called **LASU Central Admission Clearance (LACACA)**. It is **different from course registration** and **different from the graduating students' clearance portal**. You **must successfully complete LACACA** before LASU issues your matriculation number.

Here's the complete process.

Stage 1: Accept Your Admission

Before you can begin clearance, you should have:

- Accepted your admission on JAMB CAPS.
- Printed your JAMB Admission Letter.
- Printed your JAMB Result Slip.
- Chosen LASU as your first-choice institution.
- Uploaded your O'Level results to JAMB CAPS.

Stage 2: Pay the Clearance Fee

The first payment is the **Central Admission Clearance fee**.

You will:

1. Visit the LASU payment portal.
 2. Enter your JAMB Registration Number.
 3. Provide a valid email address and phone number.
 4. Generate and pay the required clearance fee.
 5. Keep the payment receipt.
-

Stage 3: Log Into the LACACA Portal

Go to the official undergraduate admission clearance portal:

[LASU Central Admission Clearance Portal \(LACACA\)](#)

Log in using:

- JAMB Registration Number
- Surname

Once logged in, your clearance dashboard opens. ([Lagos State University](#))

Stage 4: Verify Your Biodata

Check every detail carefully.

Typical information includes:

- Full name
- Date of birth
- Gender
- State of origin
- Local Government
- Programme
- UTME information

If you discover any mistake, do **not** continue until you understand the correction procedure, as incorrect personal details can delay your clearance.

Stage 5: Upload Required Documents

The university verifies that every admitted student is genuinely qualified for the programme.

Commonly required documents include:

- JAMB Admission Letter
- UTME Result Slip
- WAEC/NECO/NABTEB result(s)
- Birth Certificate or Declaration of Age
- Passport Photograph
- Signature
- O'Level scratch card details (where requested)
- Lagos State Indigeneship Verification Certificate (for Lagos indigenes only)

Depending on the admission year or programme, LASU may request additional documents, so always follow the checklist displayed on your dashboard. ([Lagos State University](#))

Stage 6: Submit Your Clearance

After uploading everything:

- Review all information.
- Tick the declaration confirming the information is correct.
- Submit the application.

At this point, your dashboard shows that your documents have entered the university's verification process.

Stage 7: University Verification

LASU officers review your submission.

They compare:

- JAMB records
- O'Level results
- Admission details
- Birth information
- Uploaded documents

The university may:

- Approve your submission.
 - Reject specific documents.
 - Request corrections or clearer uploads.
-

Stage 8: Correct Any Errors (If Required)

Common reasons for rejection include:

- Blurred scans.
- Wrong document uploaded.
- Name mismatch.
- Incorrect date of birth.
- Missing document.
- Invalid O'Level information.
- Poor passport photograph.

If corrections are required, follow the instructions shown on your dashboard. In some situations, LASU requires payment for document corrections before resubmission.

Stage 9: Reach 100% Clearance

When every required document has been approved, your clearance status reaches **100%**.

You can then:

- Print your Admission Clearance Certificate.
 - Receive or be assigned your LASU matriculation number.
-

Stage 10: Complete Fresh Student Registration

After successful clearance, you proceed with the remaining onboarding activities, which typically include:

- Acceptance fee confirmation (if applicable).
- School fee payment.
- Matriculation number activation.
- Course registration.
- Faculty and departmental registration.

- Student ID card processing.
- Medical registration.
- Matriculation ceremony preparations.

The exact order may vary slightly each session based on LASU's academic calendar.

Documents You Should Have Ready

Before starting LACACA, prepare clear scanned copies (preferably PDF or JPEG) of:

- JAMB Admission Letter
- JAMB Result Slip
- WAEC/NECO/NABTEB Result(s)
- Birth Certificate or Age Declaration
- Passport Photograph
- Signature
- O'Level scratch card information (if requested)
- Indigeneship Verification Certificate (Lagos indigenes only)
- Clearance fee receipt

Common Mistakes That Delay Freshers' Clearance

The most frequent issues are:

- Accepting admission on the LASU portal but **not** on JAMB CAPS.
- Failing to upload O'Level results to JAMB CAPS.
- Uploading blurry or cropped documents.
- Differences in names or dates across documents.
- Claiming Lagos indigene status without completing the Indigeneship Verification Exercise.
- Waiting until the deadline to begin clearance.

What is ethical clearance?

Ethical clearance is the official approval from the LASU Research Ethics Committee confirming that your research protects participants' rights, safety, privacy, and dignity and complies with accepted ethical standards. It is not the same as your departmental proposal approval or final-year project defense.

Complete LASU Ethical Clearance Process

Step 1: Complete your research proposal

Before applying, you should already have:

- An approved research topic.
- A well-developed research proposal.
- Your supervisor's guidance or approval (where applicable).

Your proposal should normally include:

- Title
 - Background
 - Problem statement
 - Objectives
 - Research questions or hypotheses
 - Literature review
 - Methodology
 - Data analysis plan
 - References
-

Step 2: Determine whether your study requires ethical approval

According to LASU-REC, ethical review is required if your study involves:

- Human participants
- Questionnaires
- Interviews
- Focus group discussions
- Observation of people

- Personal or confidential data
- Medical records
- Biological samples
- Animal experiments
- Plant experiments
- Tissue culture

If your project falls into any of these categories, you must obtain ethical approval before data collection. Examples:

Requires ethical clearance

- Survey of LASU students.
- Interviews with lecturers.
- Hospital-based research.
- AI research using identifiable student data.
- Medical or laboratory studies involving people or animals.

May not require full ethical review

- Pure software development without human participants.
- Pure mathematical or theoretical research.
- Literature review only.

Even for low-risk studies, you should confirm the requirement with your department or supervisor.

Step 3: Download the LASU-REC application documents

LASU provides an official **Research Ethics Approval Application Form** and an accompanying application procedure through its downloads page.

Step 4: Prepare all required documents

A complete application typically includes:

- Completed LASU-REC application form
- Full research proposal
- Data collection instrument (questionnaire, interview guide, etc.)
- Participant Information Sheet (if applicable)
- Informed Consent Form (if applicable)
- Recruitment materials (if applicable)

- Any additional supporting documents requested by LASU-REC
- Plagiarism Test Result and Receipt ([LASU Services](#))
- Ethical Clearance Receipt([LASU Services](#))

Step 5: Prepare the Participant Information Sheet

Participants should be informed about:

- The purpose of the research
- Why they were selected
- What participation involves
- Expected duration
- Possible risks
- Expected benefits
- Confidentiality arrangements
- Voluntary participation
- Right to withdraw at any time
- Researcher's contact information

This allows participants to make an informed decision before taking part.

Step 6: Prepare the Informed Consent Form

Participants should explicitly agree to participate after understanding the study.

The consent form generally confirms that the participant:

- Understand the study.
- Participates voluntarily.
- May withdraw without penalty.
- Understands how information will be used.

For minors or vulnerable participants, additional consent requirements may apply.

Step 7: Submit your application to LASU-REC

Submit the completed application and all required documents to the LASU Research Ethics Committee following the submission instructions provided by the committee. The application procedure document includes the committee's contact information, including its official email.

Step 8: Ethical review

The committee evaluates whether:

- Risks have been identified and minimized.
- Participants' rights are protected.
- Privacy and confidentiality are adequately addressed.
- Consent procedures are appropriate.
- The study has scientific merit.
- The expected benefits justify any risks.

Reviewers may request revisions before granting approval.

Step 9: Respond to reviewer comments

If revisions are requested:

- Address every comment carefully.
- Revise your proposal and supporting documents.
- Resubmit the corrected version.

This stage may involve more than one round of review depending on the issues identified.

Step 10: Receive ethical clearance

Once approved, LASU-REC issues an **Ethical Clearance/Research Ethics Approval**.

Only after receiving this approval should you begin:

- Administering questionnaires
- Conducting interviews
- Recruiting participants
- Collecting research data

Starting data collection before approval may result in the committee declining to recognize the data collected before clearance.

Common reasons applications are delayed

Many applications are returned because they include:

- Missing informed consent forms
- Weak confidentiality plans
- Unclear methodology
- Poorly designed questionnaires
- No explanation of potential risks
- Missing participant information sheet
- Incomplete application forms

Preparing a complete package before submission can significantly reduce delays.

Practical example

Suppose your project is:

"The Impact of Artificial Intelligence Tools on Academic Performance of Computer Science Students in LASU."

Your ethical clearance package would typically include:

- Research proposal
- LASU-REC application form
- Questionnaire
- Participant Information Sheet
- Informed Consent Form
- Any supporting documents requested by the committee

After LASU-REC approves the study, you may begin distributing questionnaires and collecting responses.

By contrast, if your project is:

"Development of a Mobile Inventory Management System"

and it involves only software design and testing without collecting data from human participants or using identifiable personal data, it may not require full ethical clearance. However, if you plan to evaluate the system through surveys, interviews, or usability testing with users, ethical approval is generally required before those activities begin. Your supervisor and department should advise you based on your study design.
